

```
class Recipe(models.Model):
    id = models.AutoField(primary_key=True)
    recipe_name = models.CharField(max_length=255)
    ingredients = models.TextField()
    cooking_time = models.CharField(max_length=10)
    difficulty = models.CharField(max_length=50)
    picture = models.ImageField(upload_to='recipe_pictures/', null=True,
blank=True)
```

Before I didn't have picture. I decided to add picture for the purpose of this task. Adding pictures to the home page but also pictures of the recipes/food can be useful and inviting.
